

# NGER Surveillance Audit

---

*Your NGER data will underpin Australia's emissions trading scheme. Each reporting entity is responsible for the accuracy and quality of their NGER submission.*

*The data you submit this year may have future financial implications for your business.*

*Getting it right now will be much easier than trying to make corrections later.*

*HAC's greenhouse and energy verification team has not yet come across a single organisation with a completely clean bill of health on energy and emissions record-keeping.*

Your energy and greenhouse data is about 10% of a complete NGER compliance program. The other 90% includes:

- Documentation and testing of Facility boundary and operational control decisions
- Gap analysis of source data
- Uncertainty and materiality assessment
- Energy and emission report verification
- Documentation of methodologies

The extent of the surveillance audit will be customised to suit your organisation's complexity and budget.

HAC conducts each surveillance audit using a combination of on-site information gathering and off-site data interrogation.

Our team will deliver a report and a briefing, detailing our work program, our findings and our recommendations. The surveillance audit will provide you with a comprehensive quality assessment of your NGER systems, and a clear path to resolve any outstanding issues.

Following your action on any recommendations, HAC will document our professional opinion that your data is "Submission-Ready", clearly stating any limitations to this opinion.

HAC is experienced in NGER strategy, carbon accounting and carbon neutrality. Our team has expertise across several sectors of the economy, including transport, mining, oil & gas, manufacturing, agriculture and local and state government.

# Our Overall Capability

---

*A price on carbon is just one factor creating upward pressure on electricity and fuel prices. Your NGER data can give you an insight into the risks and opportunities that these increasing input costs represent to your business.*

*HAC develops strategies to help your business thrive, not just survive in a carbon constrained economy.*

*The development, implementation and commercialisation of new technologies has always carried risks and challenges.*

*HAC Consulting has the expertise and experience to help smooth the pathway and manage the challenges to optimise your return on investment.*

## **HAC Consulting Pty Ltd**

Founded by key leaders of the team that managed Perth's Hydrogen Fuel Cell Bus Trial, HAC Consulting was established in 2007 to help industry and Government prepare for a carbon constrained future.

Our combination of engineering expertise, commercial acumen and policy experience enables us to serve both corporate clients and government with equal insight.

With experience covering many sectors of the economy, HAC assists with:

- strategic planning,
- risk analysis,
- technology assessment,
- business case assessment,
- technology commercialisation,
- project delivery,
- energy management,
- emissions auditing and reporting.

Corporate and government clients rely on HAC for the tools and analysis they need to prepare for, and to thrive in, Australia's low-carbon future.

HAC's principle offices are located in Melbourne, Perth and Kalgoorlie. We have considerable experience working as individual consultants or contractors, through to leading large project teams comprising consortium partners and/or significant subcontractors.
